Amazon Party Rock: -

Summary: -

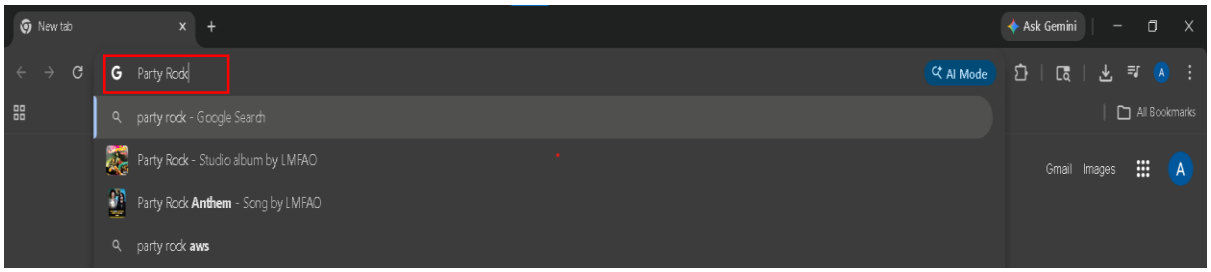
Amazon PartyRock is a no-code AI application builder by Amazon Web Services that allows users to create generative AI apps using a simple web interface with prompts and widgets. It supports three methods of app creation: starting with a prompt, remixing existing apps, and building from scratch. Widgets serve as core components to take input, process it with AI, and generate outputs like text, chat, or images. Users can customize, connect, and share apps, making PartyRock a beginner-friendly platform for learning and building AI applications.

Party Rock: -

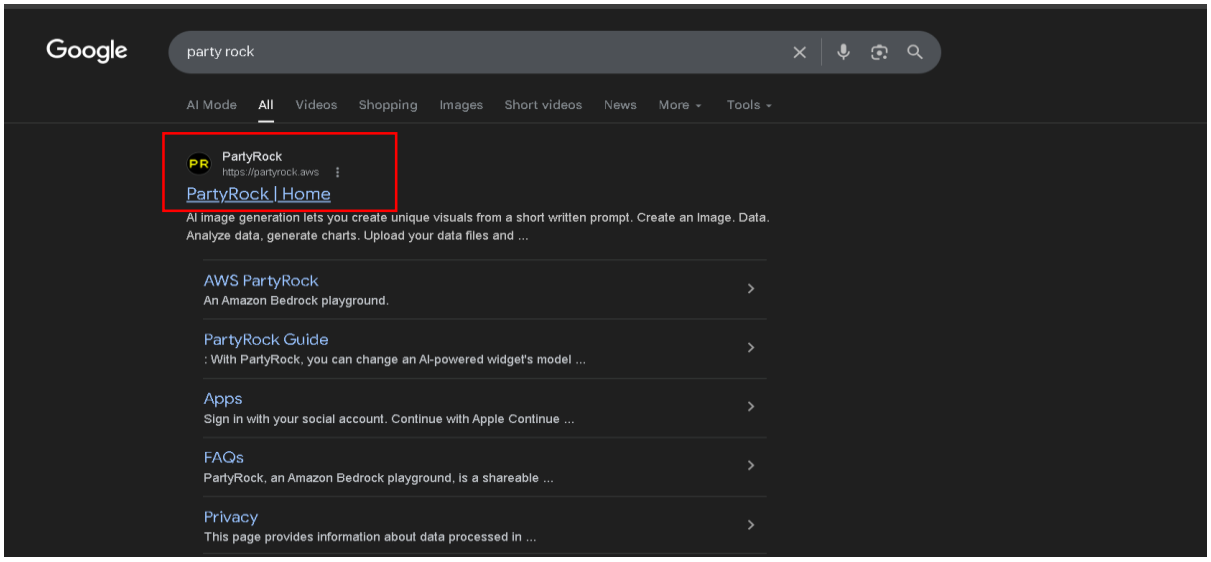
Party Rock is a no-code AI builder created by Amazon Web Services it allows you to build generative AI applications without writing any code.

How to use:-

- You can Access party rock through its own web-based UI
- It is completely separated from AWS hence no AWS account needed.
- Anyone can experiment with Party Rock by creating a profile using a social login.

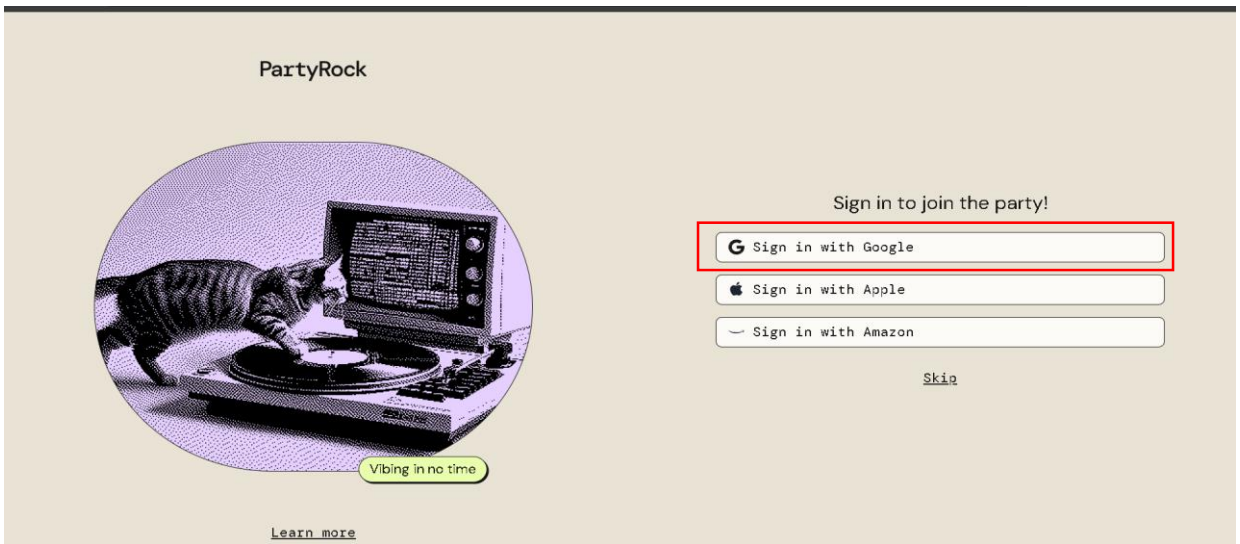


- Now just go to your Browser and search Party Rock.

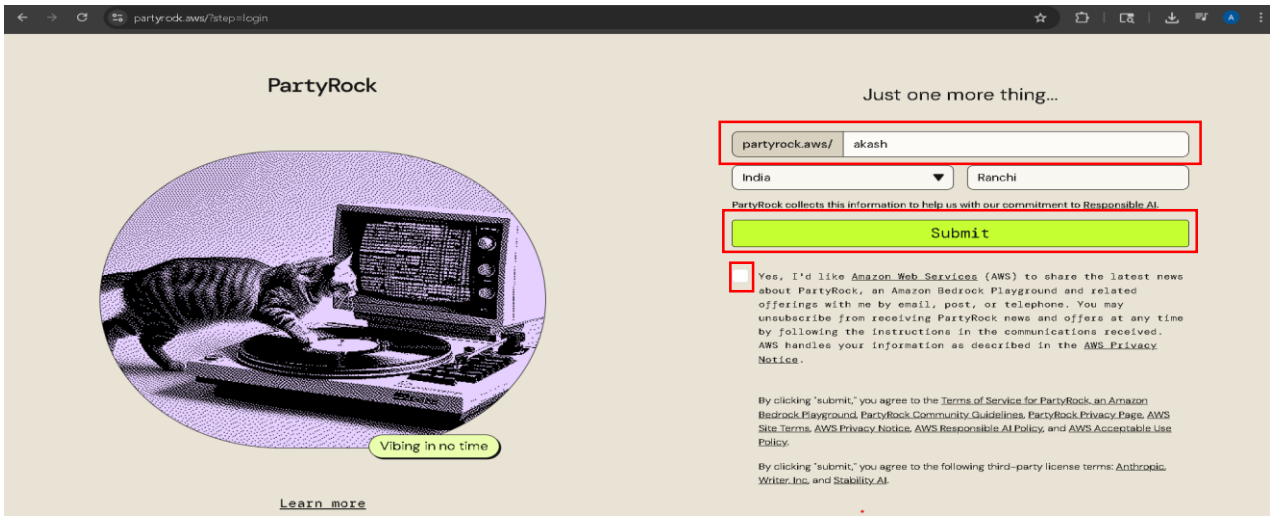


- Now just click first link.

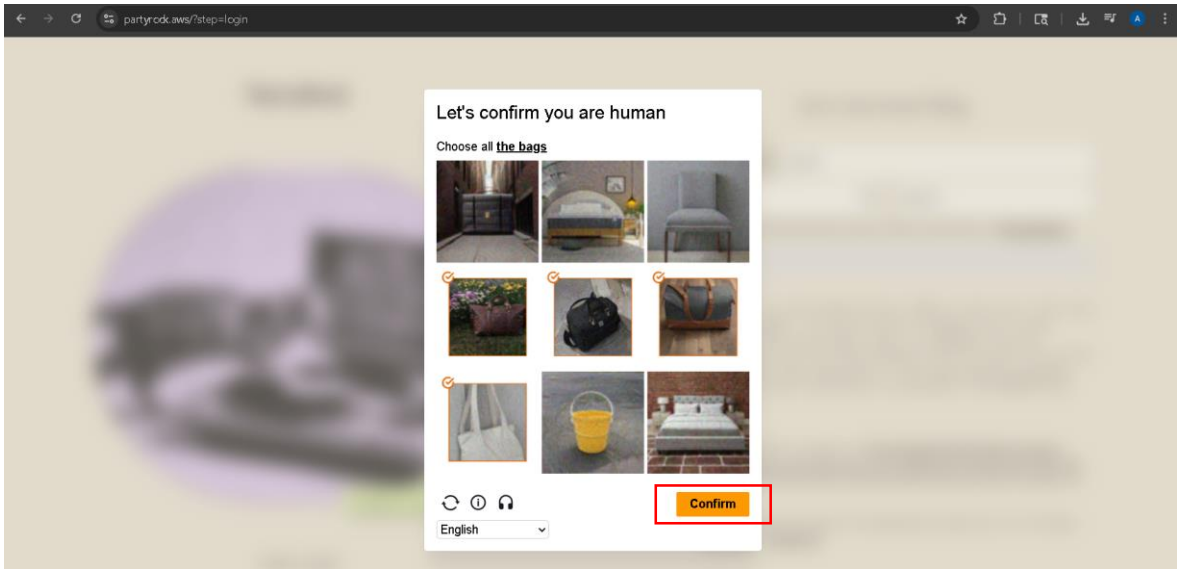
- Click sign up for free.



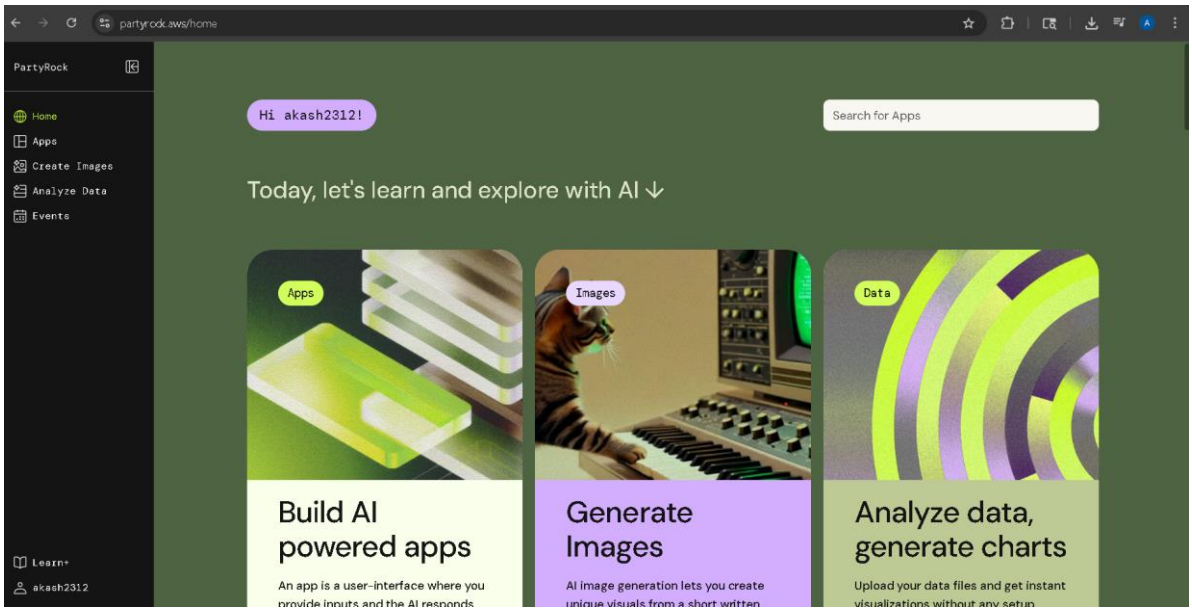
- Sign in with Google.



- Now just enter your username , check the box and click submit.



- Now Just click confirm.



- Now our Party rock id is created.

Create an app with Party Rock AWS: -

We have 3 ways to Create an app with Party Rock: -

- Start with a prompt.
- Remix an app.
- Building From Scratch.

Start with a prompt: -

User input a short sentence or scenario (e.g. “a cat chasing a mouse”) and a app generates a fun story using emoji to represent the word.

It’s a light and entertaining way to turn text into creative emoji’s table.

Widgets: -

In Party Rock (by Amazon Web Services), widgets are the building blocks of your app. Each widget performs a specific role like taking input, processing data with AI, or showing output.

Types:

There are 3 different types of AI-powered widgets: -

- Image Output
- Chat Box
- AI Output

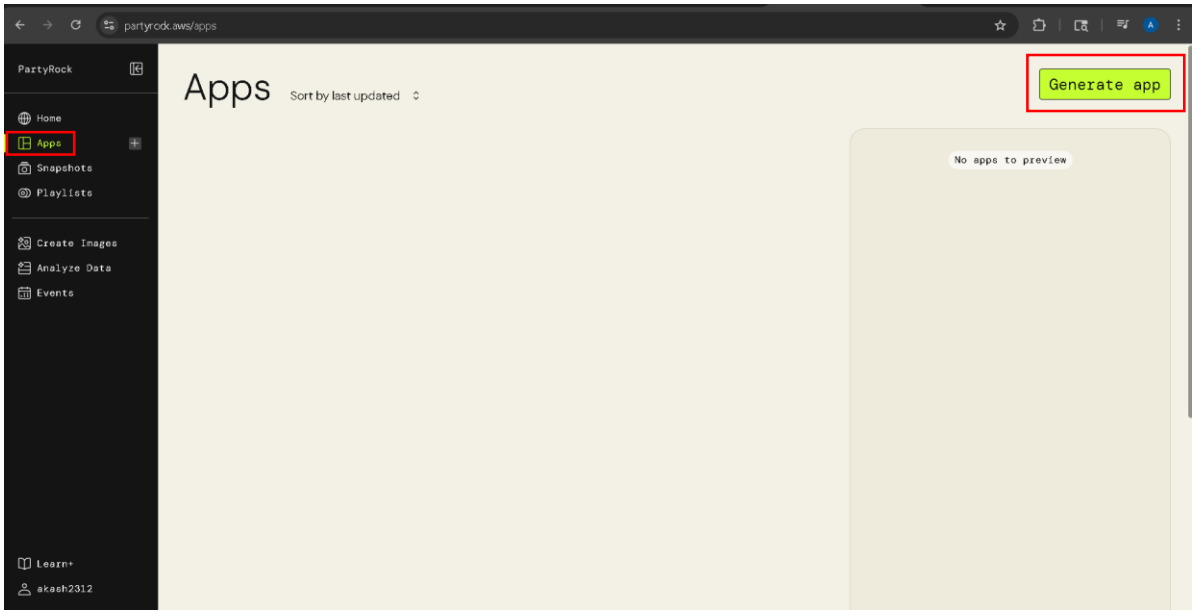
You can edit AI-powered widgets to connect them to other widgets and make their output change.

There are also 5 other widgets:

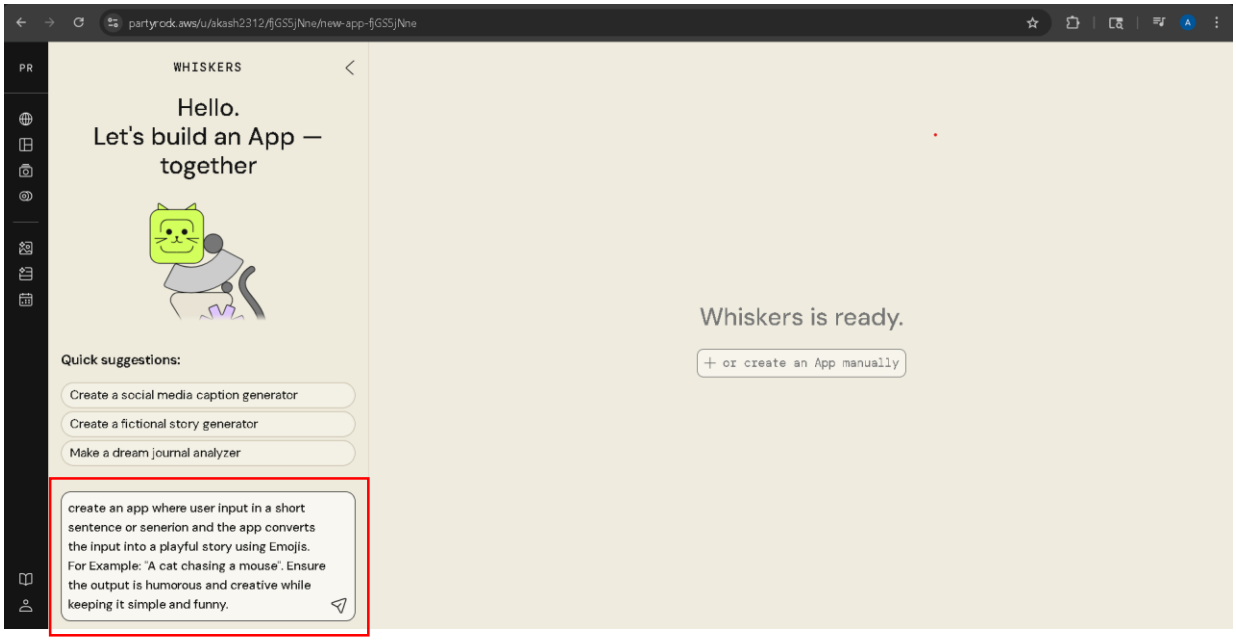
- Text Input
- Slider
- Dropdown
- File Upload
- Static Text

Now Create App Using Prompt: -

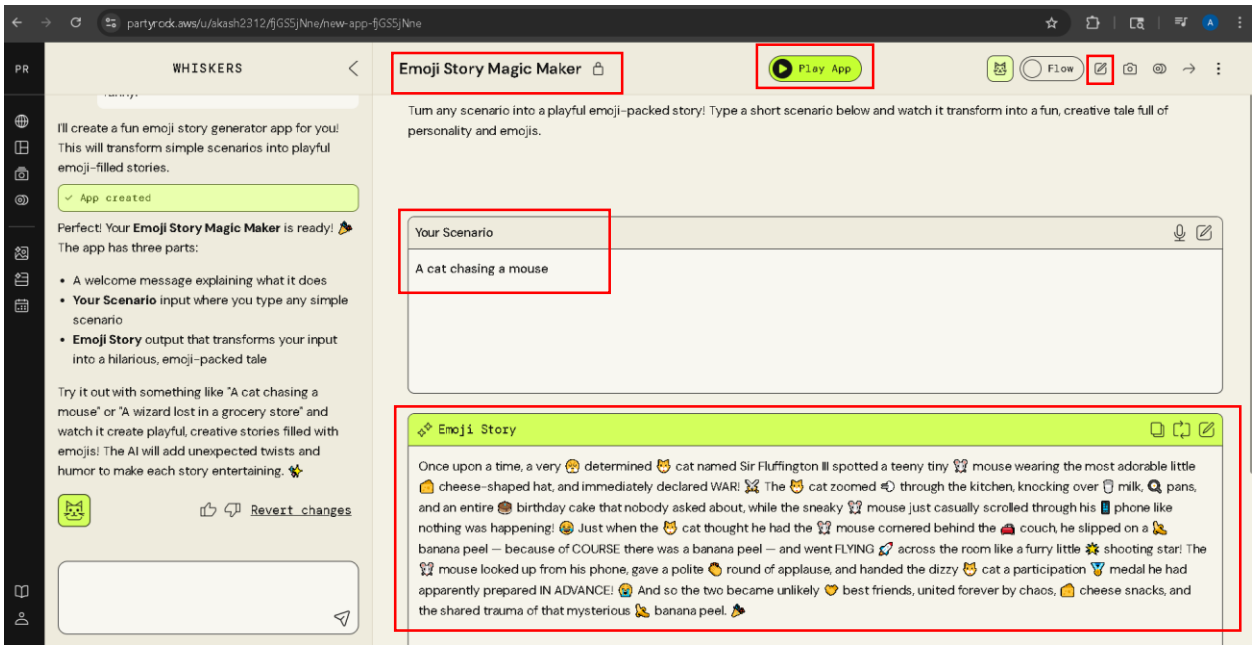
- Now just Go to your PartyRock.



- Click on Apps in left side (inside navigation bar).
- Then click on Generate app.

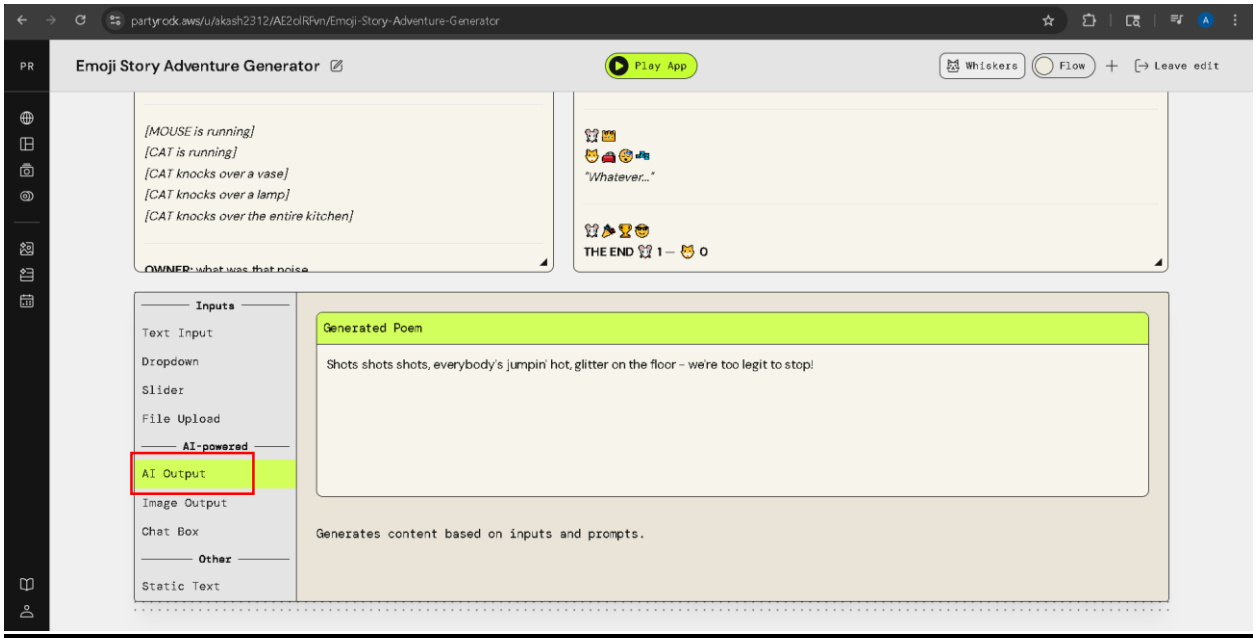


- Give a prompt.
- Example: - create an app where user input in a short sentence or scenario and the app converts the input into a playful story using Emoji's. For Example: "A cat chasing a mouse". Ensure the output is humorous and creative while keeping it simple and funny.
- And press Enter.

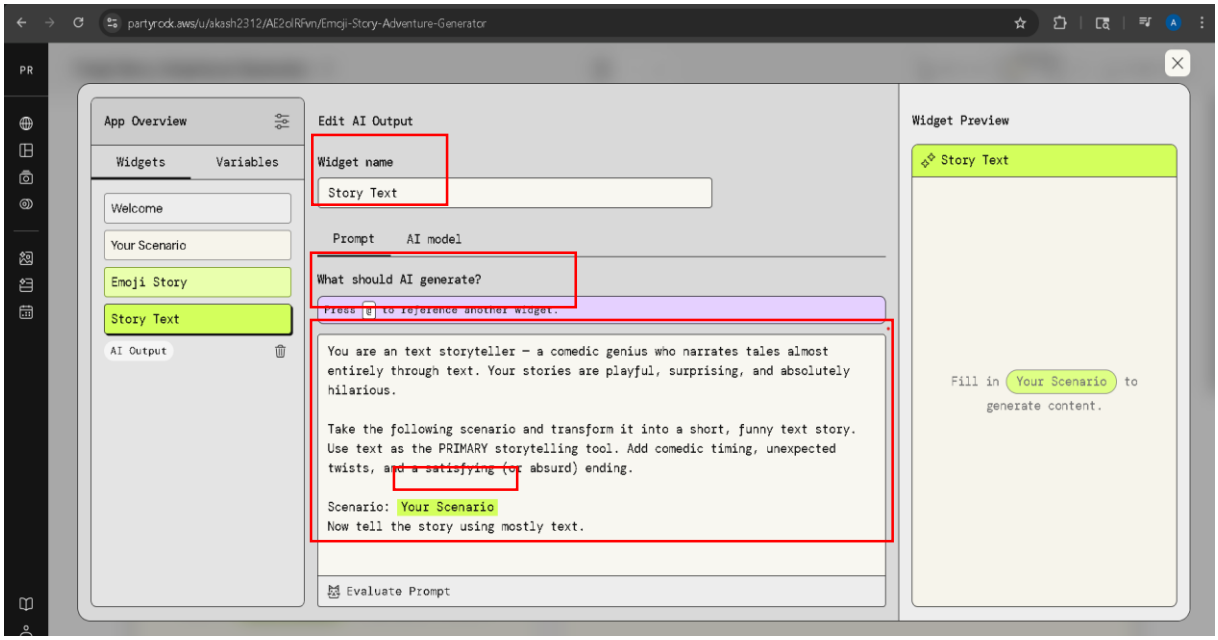


- Our app is created (Emoji Story Magic Maker) and Ready to use.
- Give a Scenario.
- Click on Play App on the top.
- And See it's gives an Emoji Story.
- If you want to edit your app interface, click on top 5 icon from the right side.
- You see your application in that application your Scenario, Emoji Story, sub heading all are widgets you can edit and add new widgets also in your app.

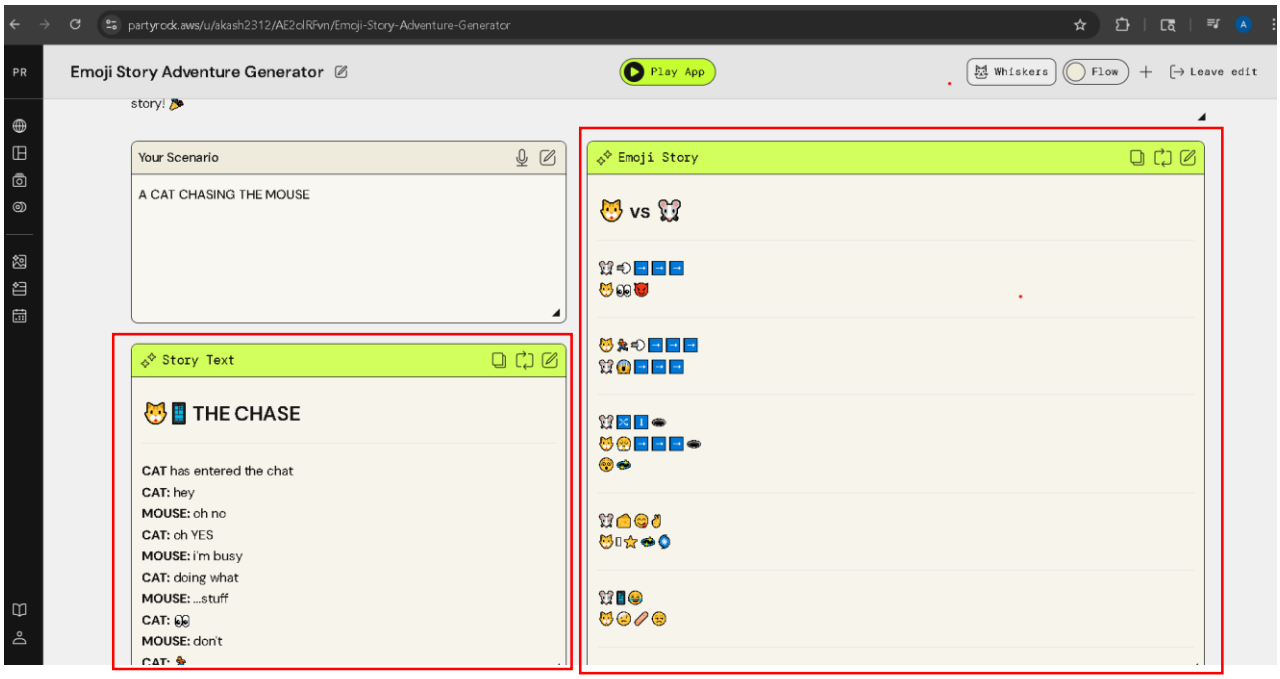
- Scroll down in your app and see blank space.
- Move your cursor on that space.
- A option comes Create Widget.
- For Creating New Widgets click on Create widgets.



- Know choose which type of widget you want
- I choose AI output



- Give widget Name.
- And prompt what this widget give as output
- And press @ to reference another widget
- Here Reference widget is Your Scenario.
- And also Edit Emoji Story Prompt so they only tell story in Emoji's.

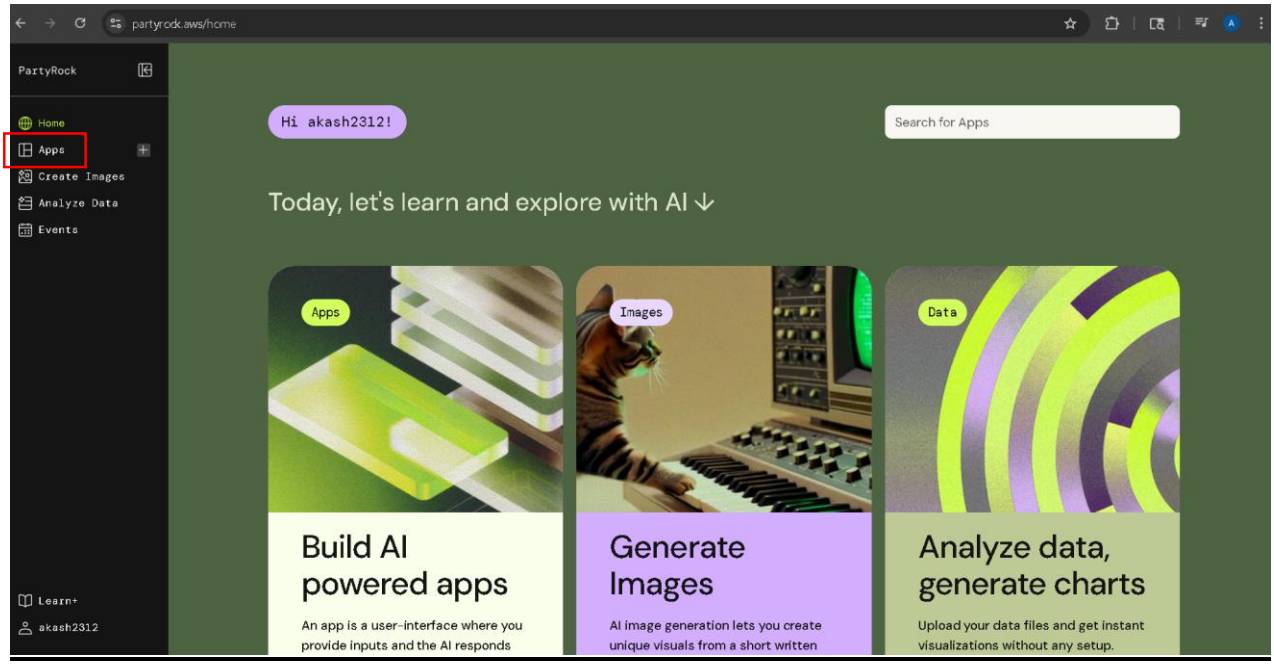


- Now our New Widget is Ready they give text story.
- And Emoji Story gives Story in Emoji.
- You also Add widgets that generate image same process.

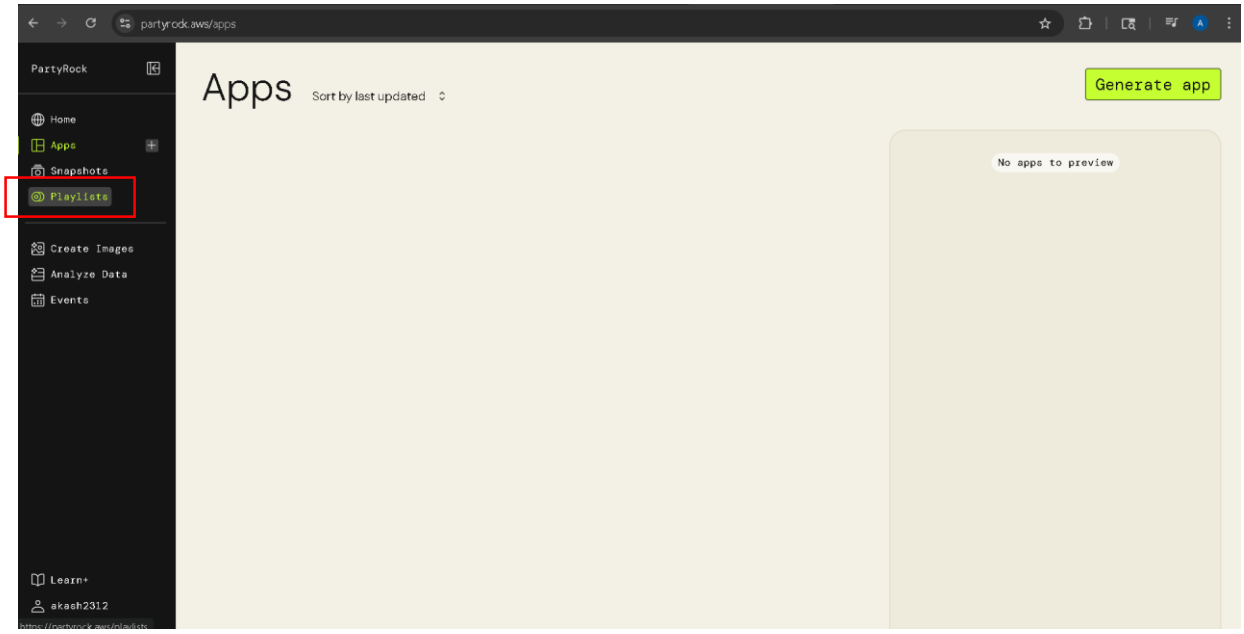
Remix an App: -

Remix App is a feature that allows users to duplicate an existing PartyRock app and modify it according to their needs.

Now How We can Remix an App Let's See: -

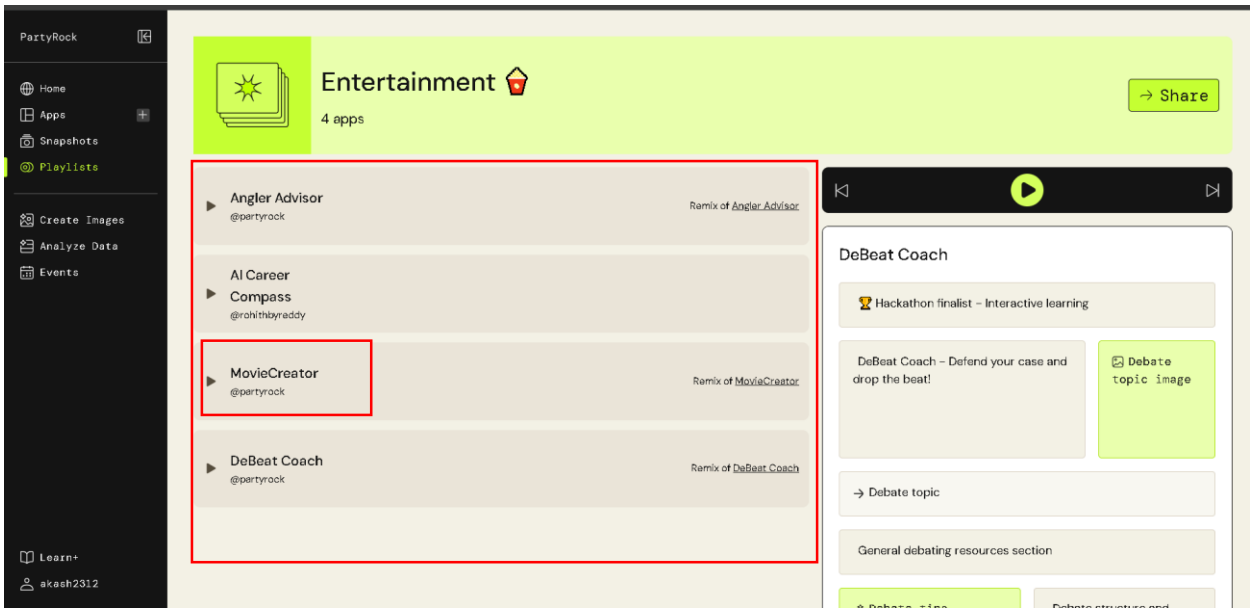


- Go your PartyRock application.
- Click Apps in Navigation bar.

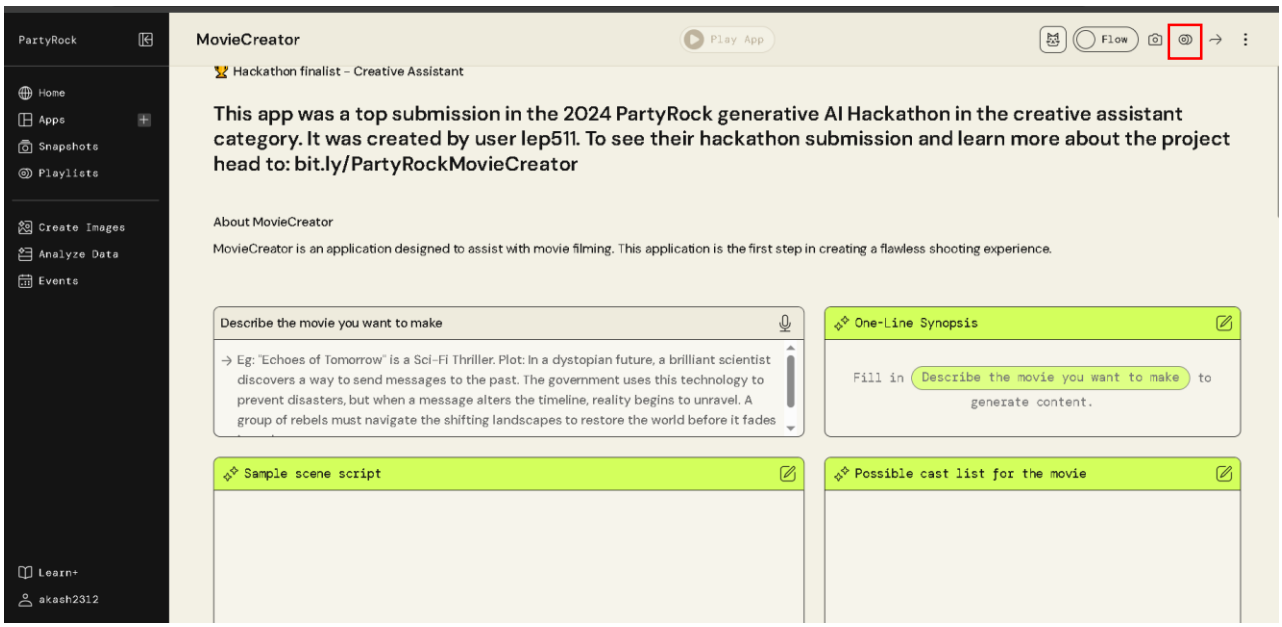


- Now click on Playlists.

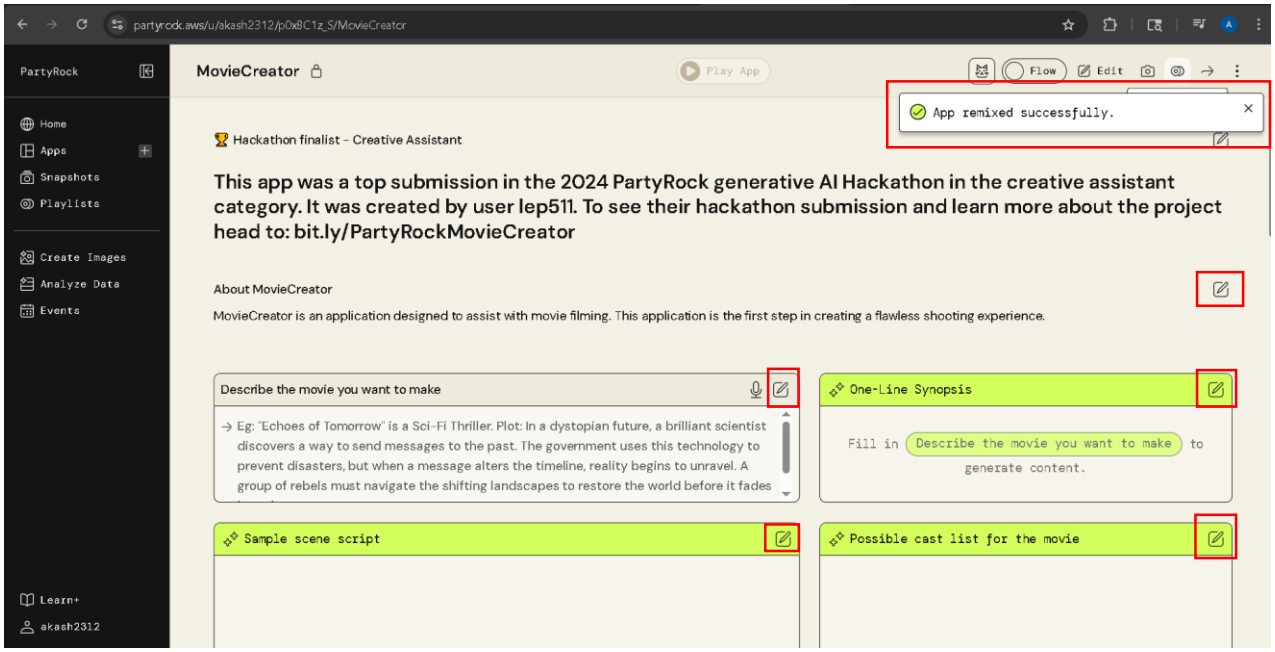
- Now you See Various Field of Application Created by another Person using PartyRock.
- Now choose which Field of Application you want to Remix.
- Let's I choose Entertainment.



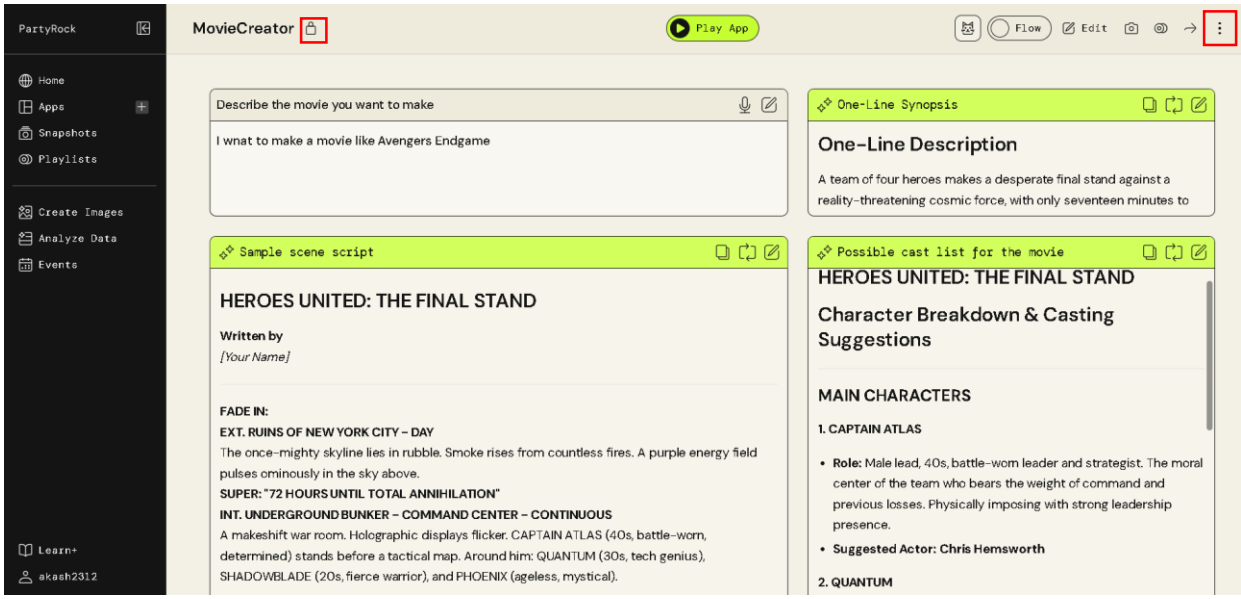
- Now you see in Entertainment Field there are various application.
- Now just choose which application you want to remix.
- Let's I Choose MovieCreator.
- And See How we can Remix or Copy this Application.



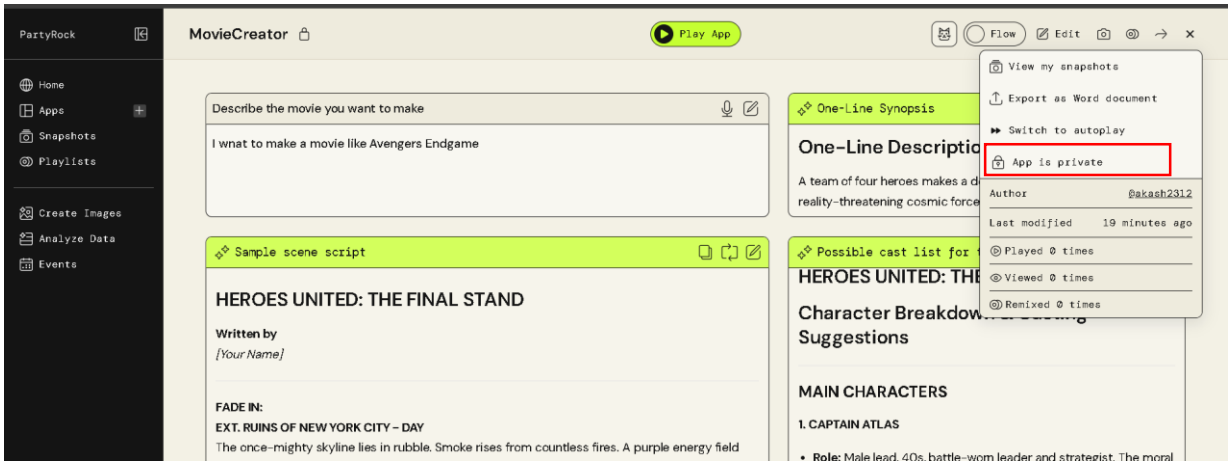
- This is the MovieCreator application created by Another PartyRock User.
- For Remix just click on the icon Present in the top at third position from Right.



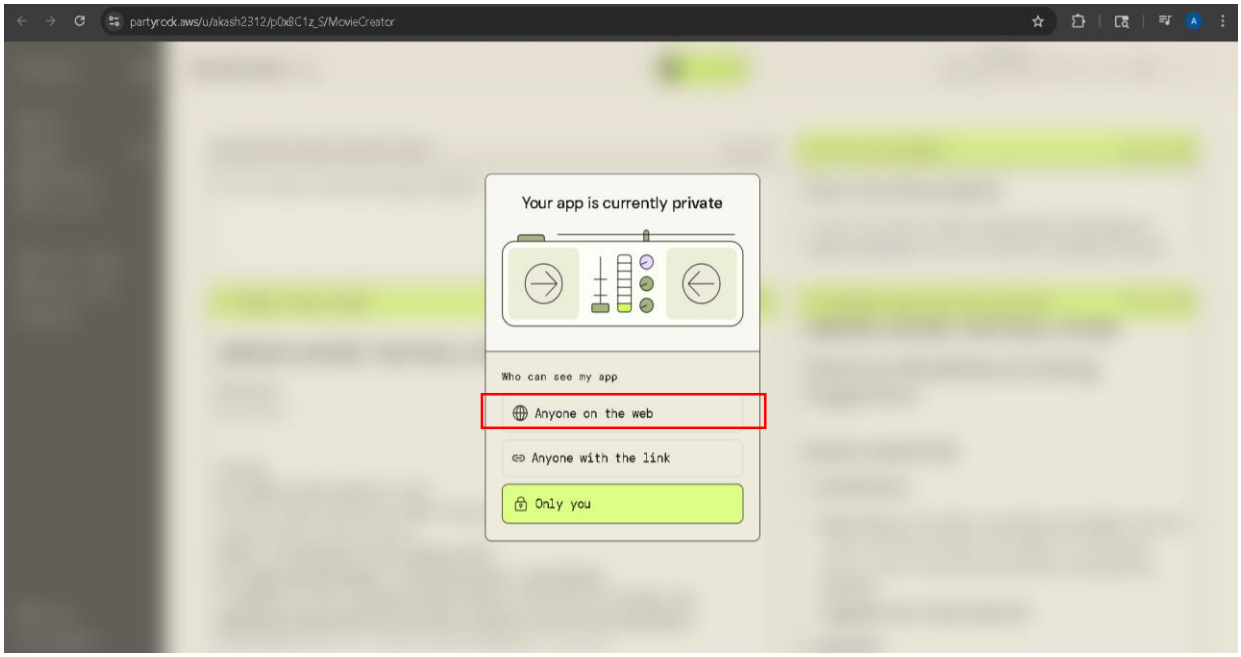
- Now you see Application is Remix Successfully.
- And Now we see in all widget we get Edit option.
- Now we and use and edit according to our choice.
- Now let's check it's running or not.



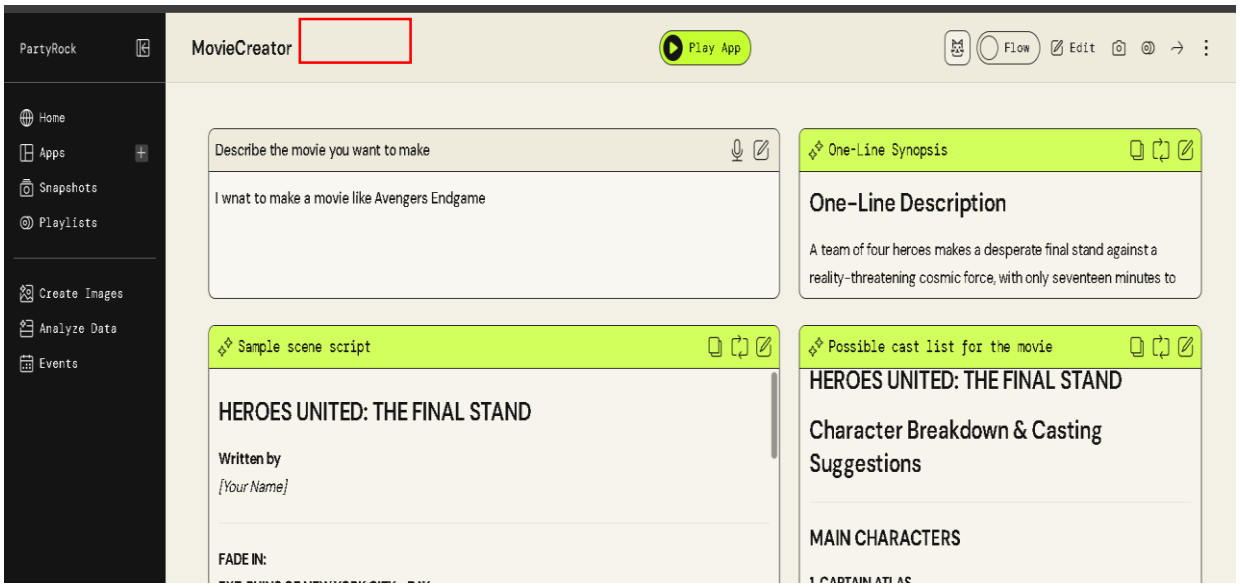
- It's Working Properly.
- Now you see in top our App Name is present and beside a lock icon.
- The lock icon shows you can only use the app.
- Mostly app that you create by using any method it is lock means no one can use.
- So let's see how we can make our app open so all can see.
- Click on the three dot on the top 1st from right side.



- Click on App is private



- Choose Anyone on the Web



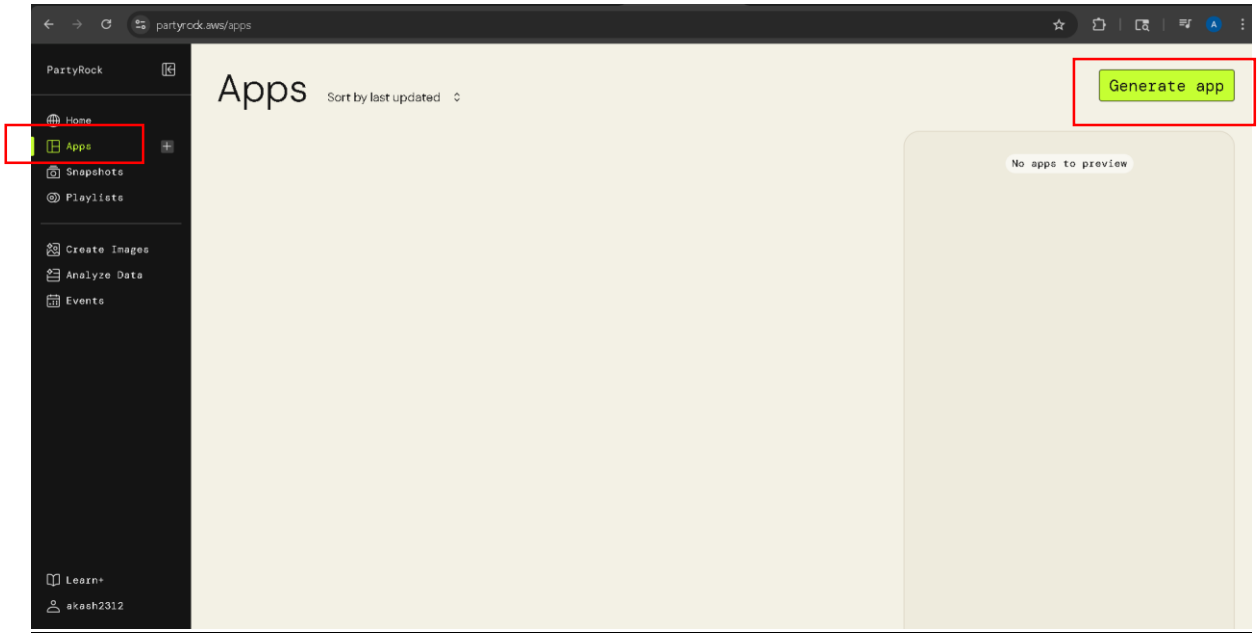
- Now you See no any lock present beside title of Application.
- Now it's Publically Available.

Building from Scratch: -

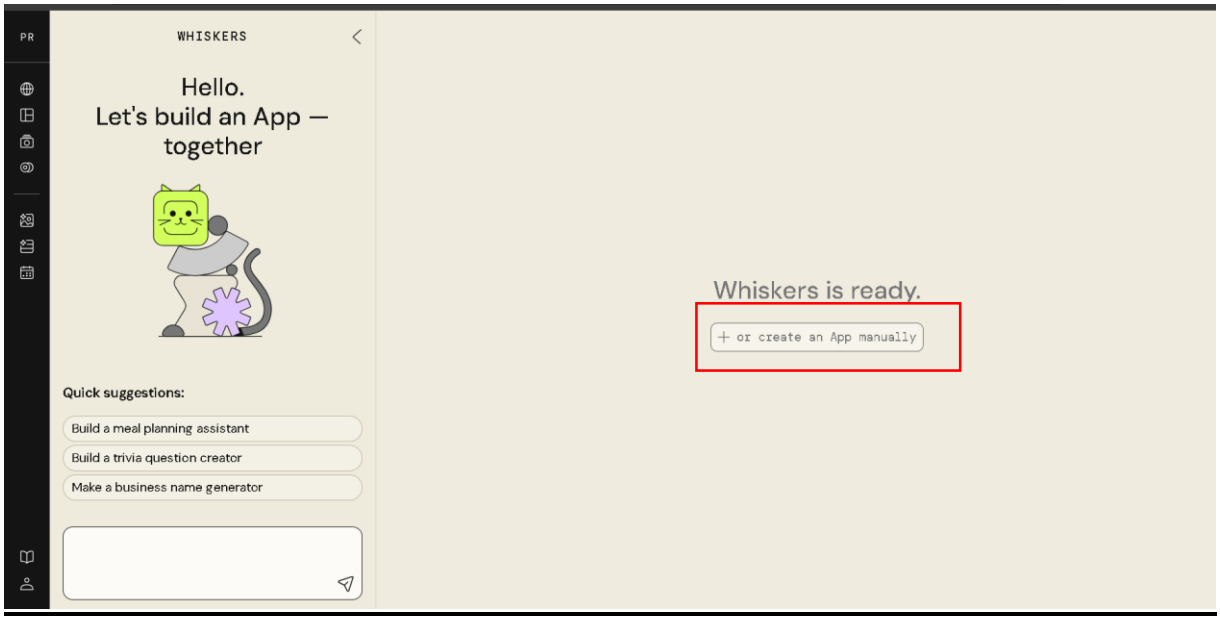
Building from scratch is the process of creating a PartyRock app by manually adding widgets, writing prompts, and connecting components without using a pre-built template.

Now Build Our Application: -

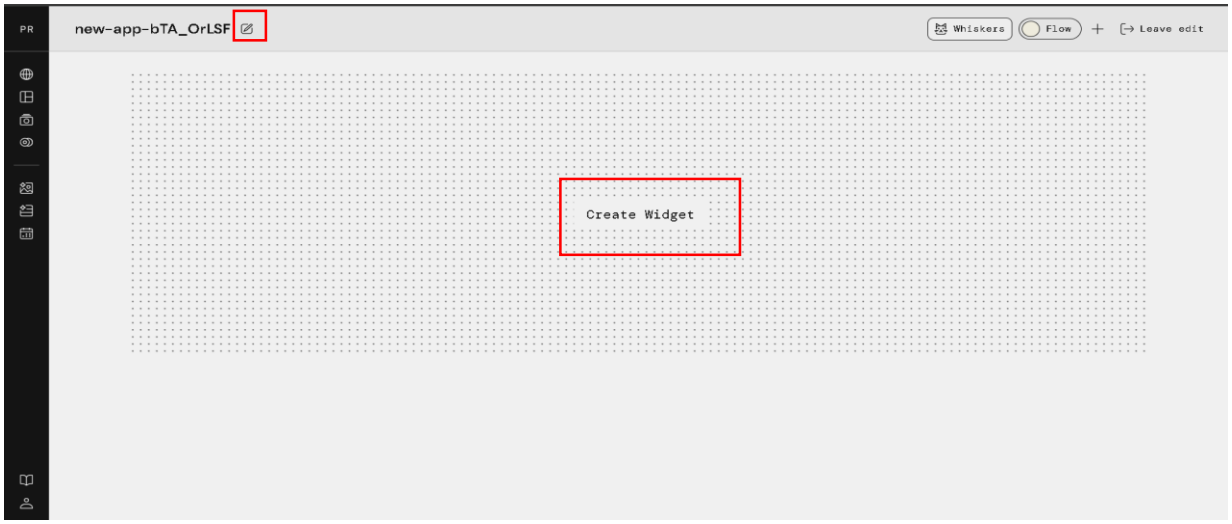
- Go to your PartyRock Application.
- And Go Inside Apps.



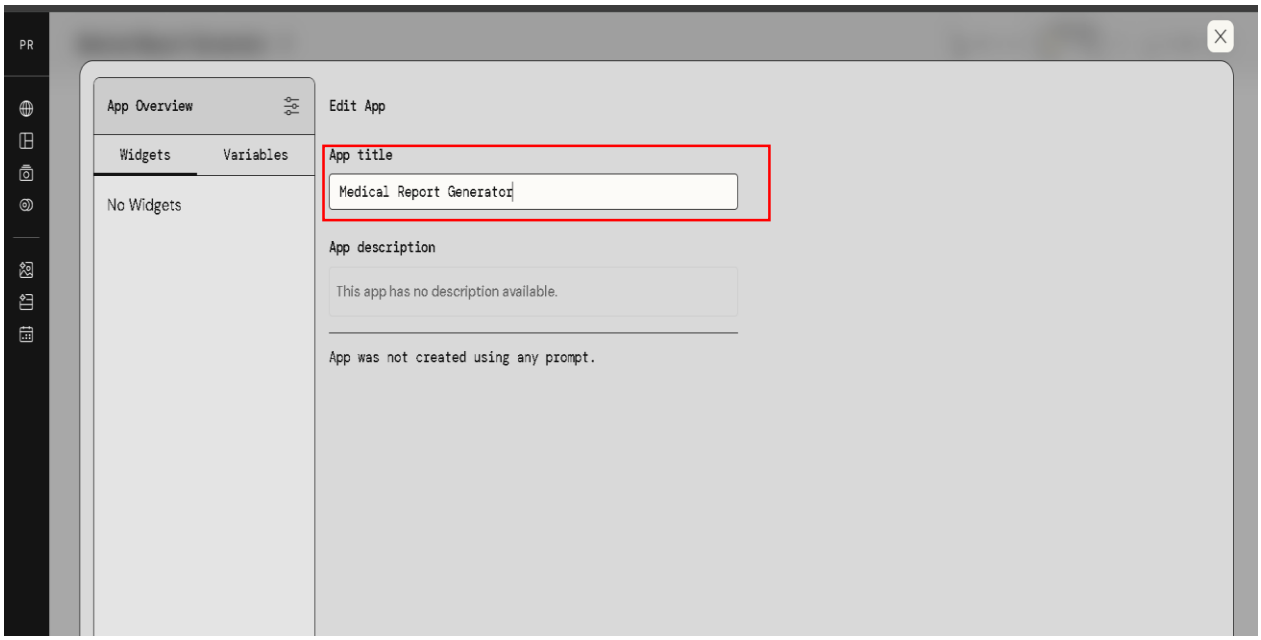
- Click on Generate App.



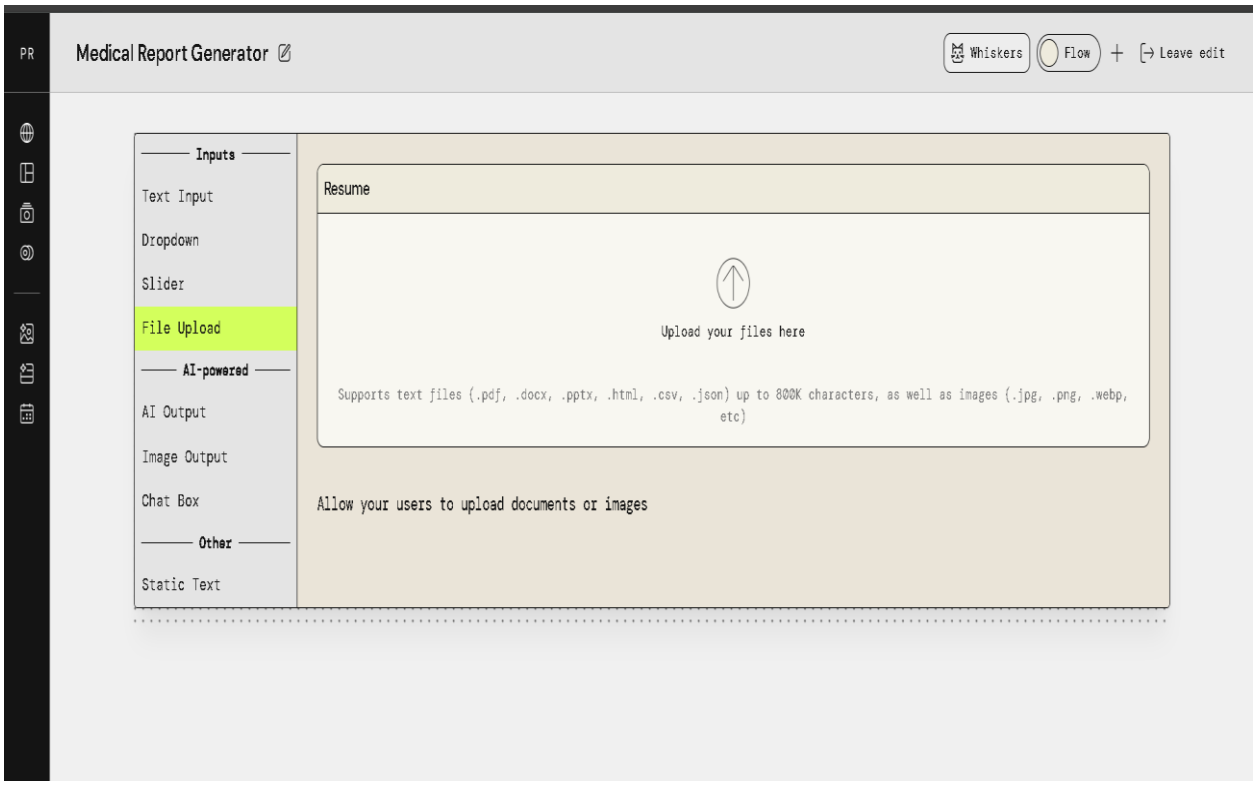
- Now Just Click Create an App Manually



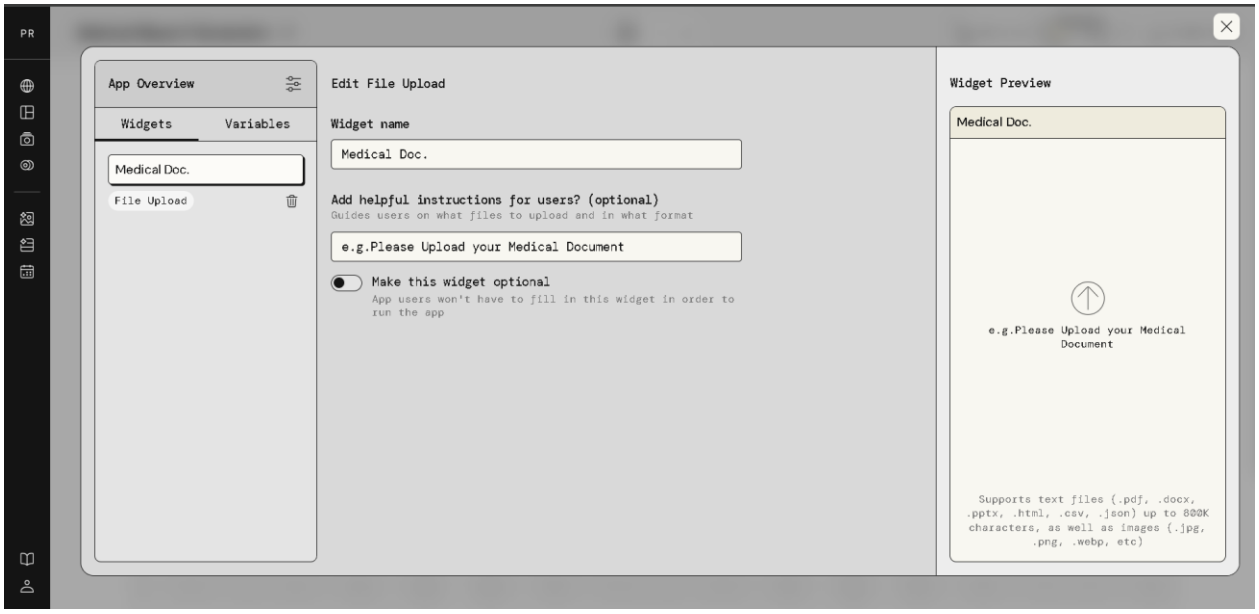
- Now you can see here we have nothing.
- We here start by adding name and widgets .



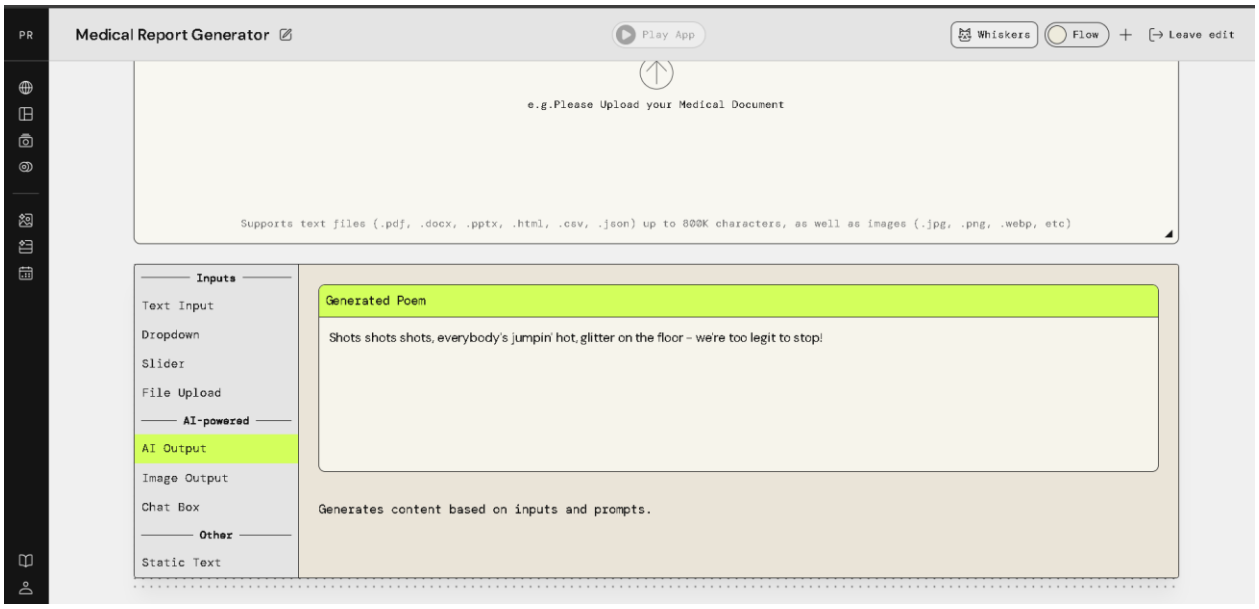
- And Firstly we start by renaming it whatever you want to name the application.
- Now basically I am trying to create Medical Report Generator.
- So it’s work is read medical document and generate report.
- I name this application Medical Report Generator.



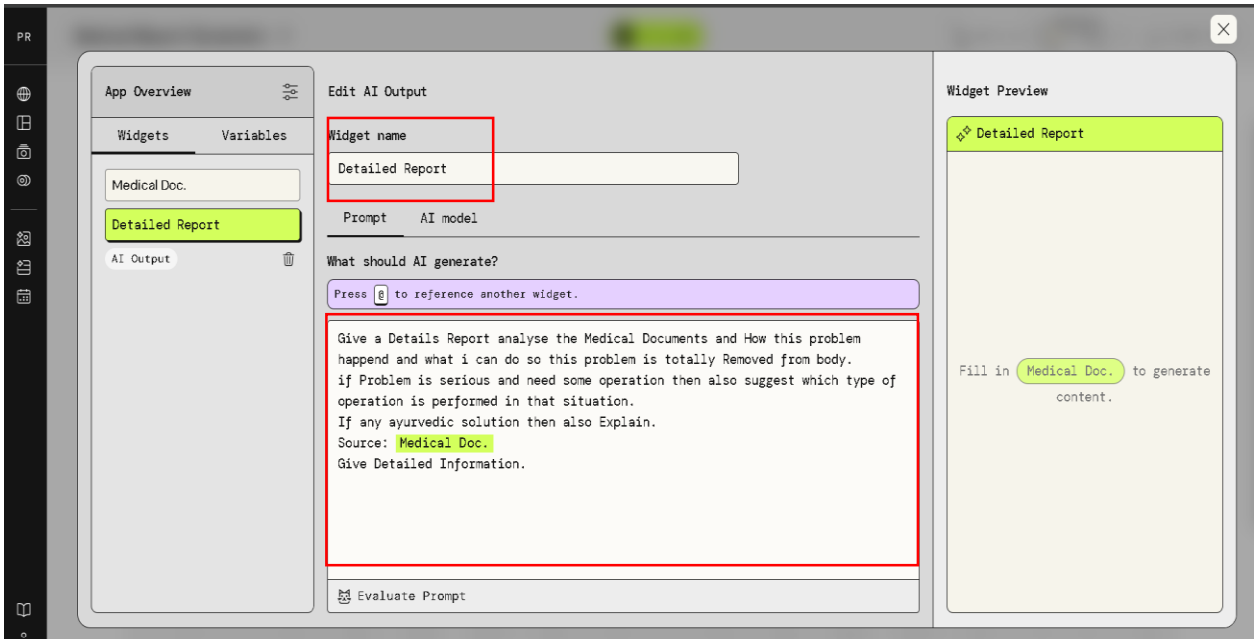
- First Widget we add File Upload (here we can upload our Medical Documents).
- And from that document our App generates Report.



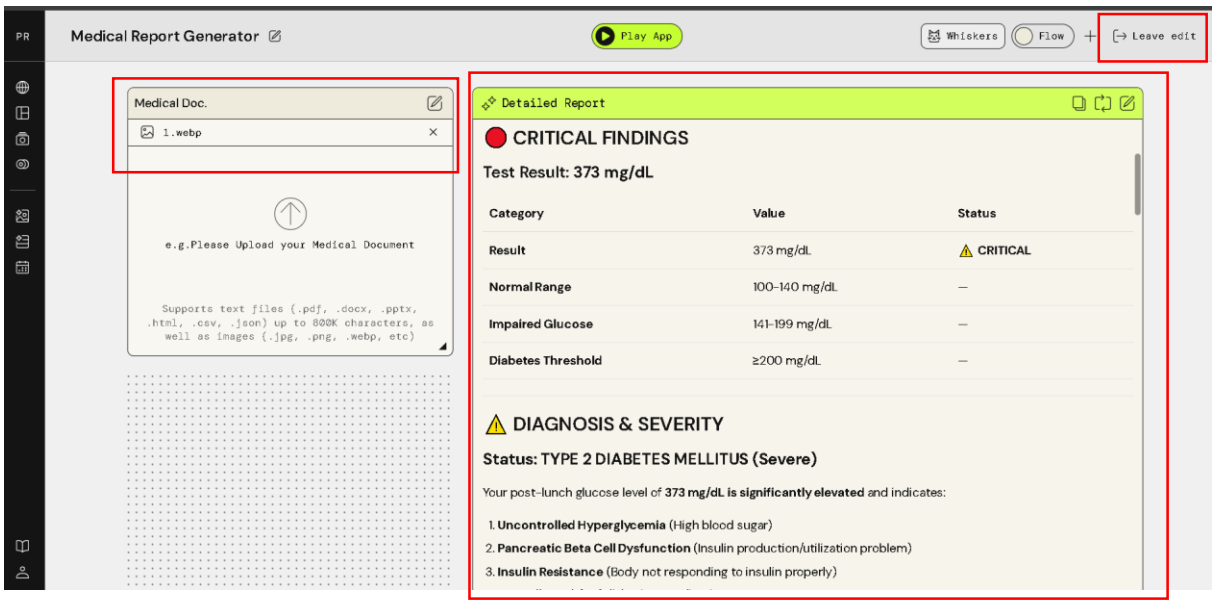
- Give Name to your widget.
- And give some helpful instruction for users.



- Now we create one More Widget for Output.
- Our app Analyse the Medical document we have uploaded and Provide Detailed Report in this Widget.
- So Let's create.



- Give name to your Widget
- And Give Prompt so AI Generate Output like that.
- Most important thing adds input source from which they generate (write @) it will give you option of widget Present in your app)
- So our source widget is Medical Doc.



- Our application is working Properly.
- Our all Work is done now click Leave Edit.
- Our application is properly working.
- And Now we created our Application From scratch.
