- So you can also check
- Copy URL paste in your browser

- And enter user name and one time password you get

- Now Register MFA Device: -

  - Choose Authentication app: - Google Authenticator

- Now scan QR with Authenticator app From Mobile and Enter Authentication code

---

- Now Authenticator is Registered
- Click on done

- Now Create New Password

- Now we are on our access Portal but there is no any app right now and that's because we are not added Amazon Q Business

- Now Go back to your Amazon Q Business application and click on Manage user access

- Click on Add Group and user

- Choose Assign existing user and group

- Click on next

-

- Search your created Group and select
- And now click on Assign

- Current subscription Q Business pro (In this Cost involve)
- Click on confirm
- Now again go to access portal and refresh

- Now you can see it's showing me demo MarketingManager app that we just created.

- Click on app

- Our app is fully Ready
- Now Add some customization on application
- Go on Amazon Q Business Console in your application

- Now click on Customize Web Experience

- Now here you customize whole things like
  - Title
  - Subtitle
  - Welcome Message
  - Theme
  - Color

- Now you see Changes is applied
- Now you can do any things

- Now your Application is properly working
- I give him one task to summarize the give Pdf as prompt

- Now you see this they summarize the whole document
- You can also go an app section and create apps
- They are perfectly working
