

# Amazon Lex

## Summary: -

I created a chatbot using Amazon Amazon Lex that can interact with users and help them perform tasks like booking flights. I configured the chatbot, added user questions and responses, customized the conversation flow, and tested the bot to make sure it worked properly.

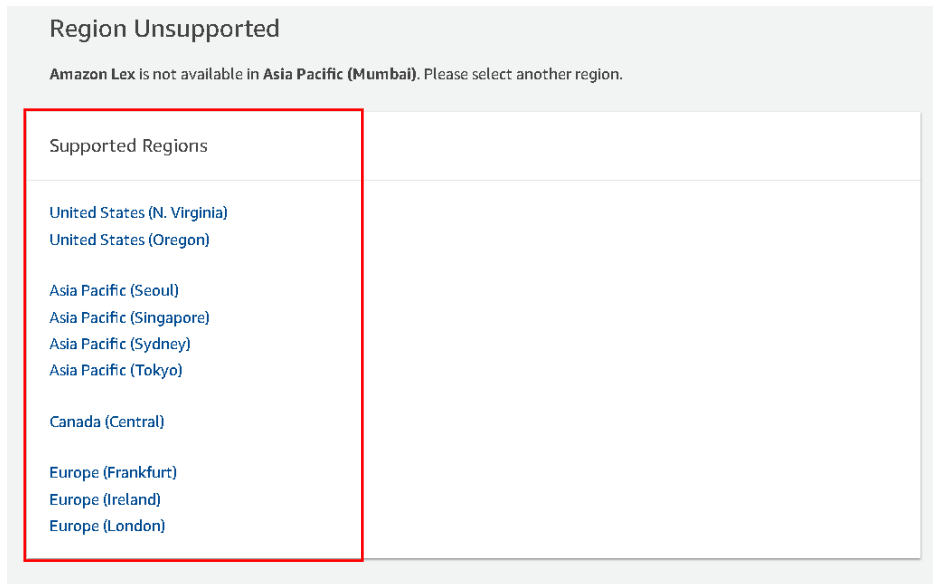

## Now some terminologies that you need to understand before you can build a chat bot using Amazon Lex: -

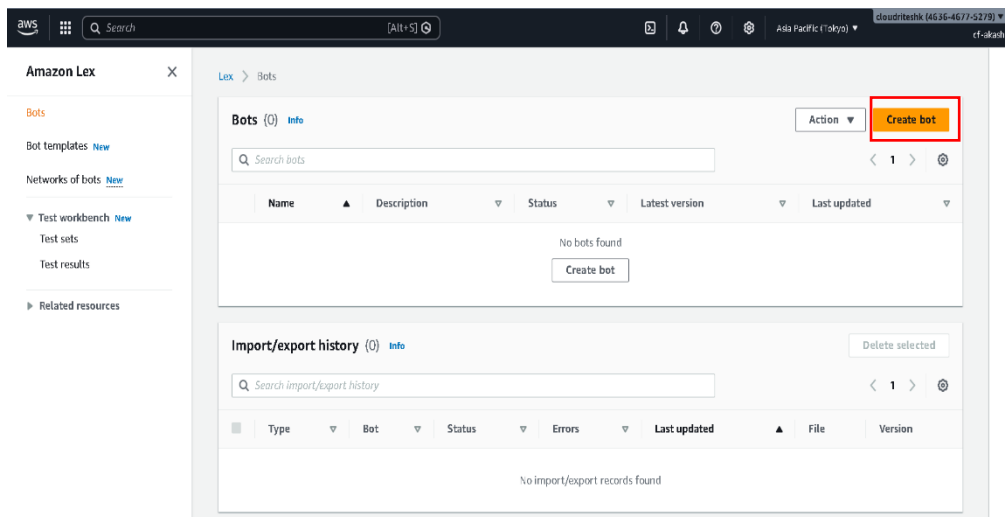

- So here a Example of chat bot that helps end user to book hotel.
- In this 4 – 5 key terms we need to understand Before Creating Amazon Lex chat bots.
  - Intents: - Intent is the action that we would like to perform. For example booking hotel, book car.
  - Utterances: - Utterances are phrases that invoke your intent. For example, I'd like to book a hotel, I'd like to reserve a car invokes your intent.
  - Slots: - Slots are user input data required to fulfill intent
  - Fulfillment: - Fulfillment is the end goal of your intent.

## Now we Create Chat bot with Amazon Lex: -

- First go to your Console.
- And Search for Amazon Lex.
- If shows Region Unsupported then change region.
- Supported Region Shows in image below.

- Now choose Supported Region.

- Now click on Right top Orange button Create Bot.

- Choose Generative AI (Descriptive bot builder).

## Bot configuration

### Bot name

FlightBooking

- Give Bot Name

## Bot error logging [Info](#)

Debug unexpected issues on Lex bots.

### Error logs

☒ Enabled

☐ Disabled

[Learn more about error logs](#) [↗](#)

## Children's Online Privacy Protection Act (COPPA) [Info](#)

Is use of your bot subject to the [Children's Online Privacy Protection Act \(COPPA\)](#) [↗](#)?

☐ Yes

☒ No

- Bot error logging
  - Enable
- COPPA
  - No

### Idle session timeout

You can configure how long a session is maintained when the user does not provide any input and the session is idle. Amazon Lex retains context information until a session ends.

#### Session timeout

minute(s) ▼

By default, session duration is 5 minutes, but you can specify any duration between 1 and 1,440 minutes (24 hours).

#### ► Advanced settings - optional [Info](#)

Cancel

Next

- Click on right bottom orange Next button.

### ▼ Language: English (US)

#### Select language

English (US) ▼

☐ Enable speech-to-speech inference

#### Voice interaction

The text-to-speech voice that your bot uses to interact with users.

Danielle ▼

#### Voice sample

Hello, my name is Danielle. Let me know how I can assist you.

Play

#### Speech model preference

The preferred speech model to use for speech-to-text

None ▼

- Choose Language
  - English
- Voice Interaction
  - The text-to-speech voice that your bot uses to interact with users
  - Basically here you choose like you need Female or Male Voice.

## ⚡ Descriptive Bot Builder - GenAI [Info](#)

You must have Amazon Bedrock set up in order to use this feature. Please ensure you have requested access to Anthropic's V3 model.

Create a description of the bot you like to build. For example "We want a bot to help customers order food (using item id, quantity, size), check order status, and cancel an order. Use Order ID for indexing order."

Describe your use case

I want to build a Flight Booking bot which allows to book flight with date, source and destination location.

Minimum characters: 100, Maximum characters: 2000

Select model

Anthropic

### English (US)

#### Conversation structure [Info](#)

##### Intents

An intent is an action that fulfils a user's request.

Intents: 1

[View intents](#)

##### Slot types

A slot type is a list of values used to train the machine-learning model to recognise values for a slot.

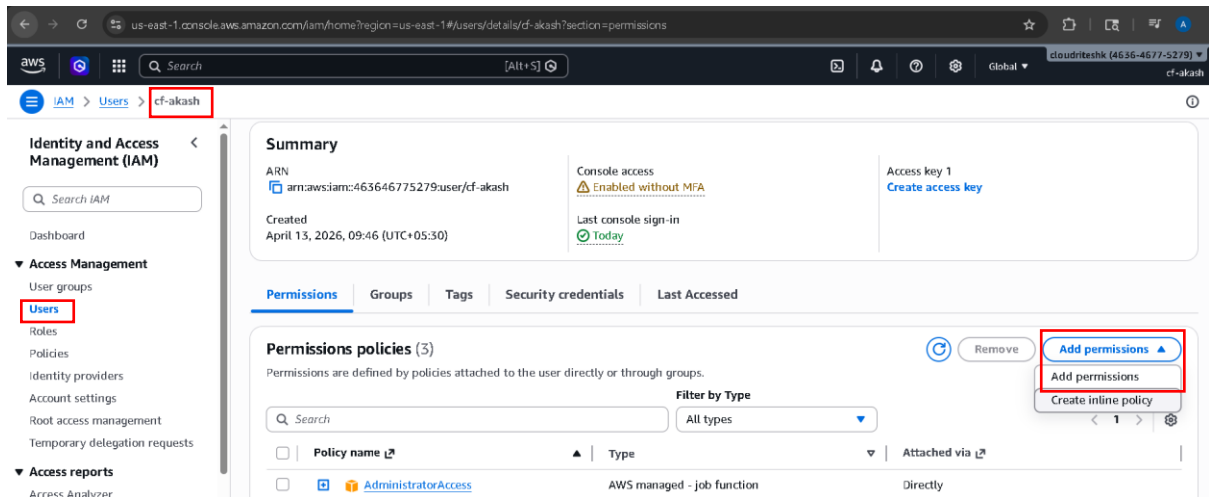

Slot types: 0

[View slot types](#)

- Generating bot for English (Us) succeeded.

### ❖ If Bot Creation Failed: -

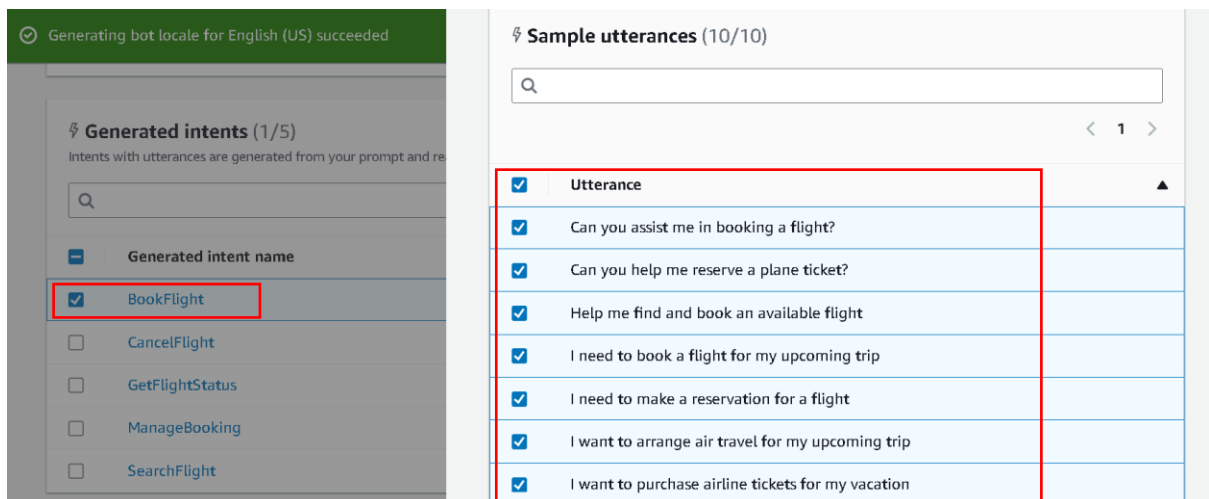

- Then Go to search bar and search IAM
- In IAM go to Users
- Search your user Name
- Click on it
- Inside username click Add Permissions

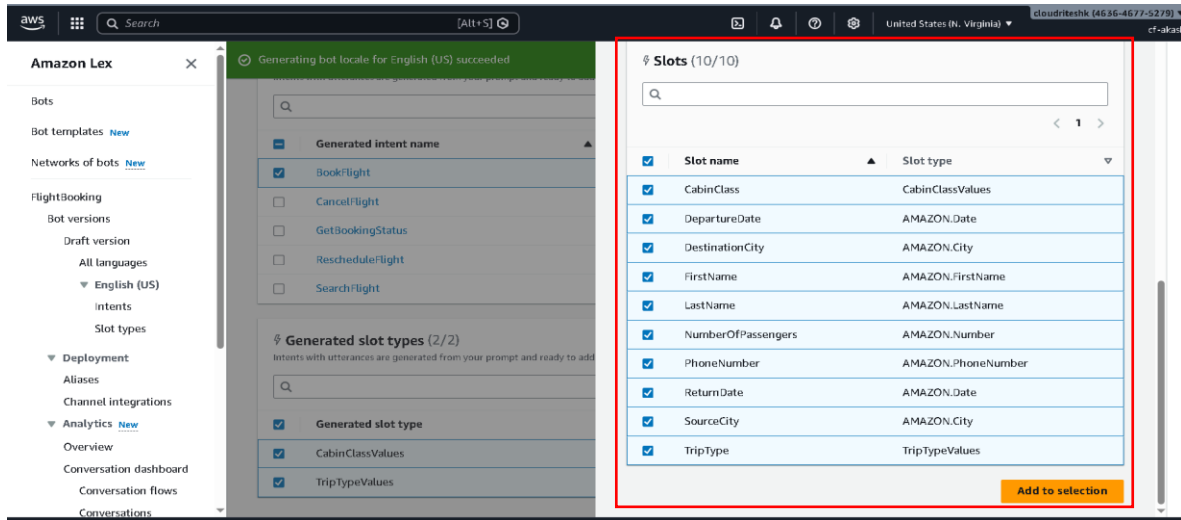

- In ADD Permissions Search **AWSMarketplaceFullAccess**.
- Add **AWSMarketplaceFullAccess**
- Now Problem is solved
- Go and create your bot.

### **Now after Creating bot: -**

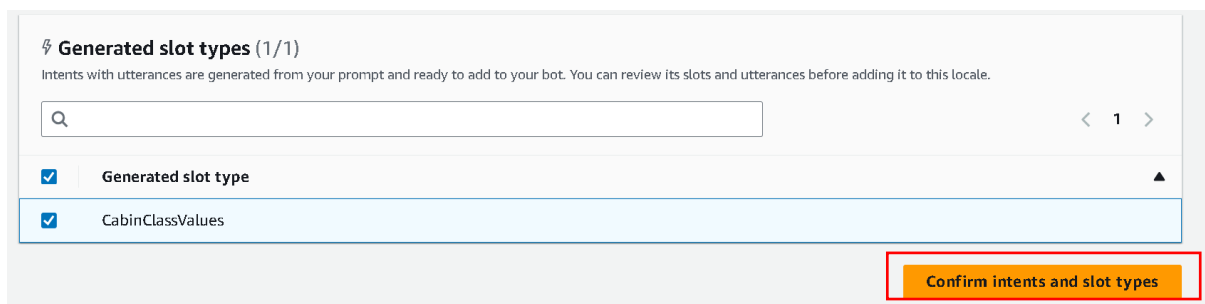

- Click on review
- There you see Generated intent.

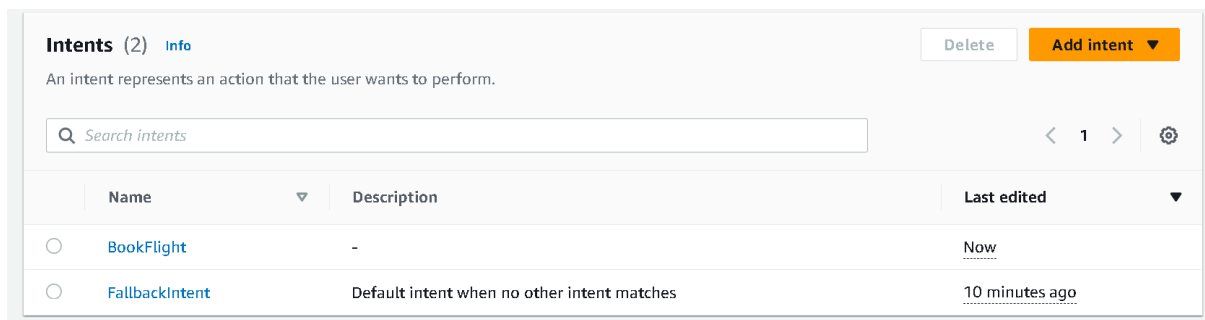

- But I choose only BookFlight.
- In image you can see some Sample utterances that we can tell or text to our bot
- And some field like source City, destination City , First Name , last Name etc..
- Click on Add to selection.
- And then click on confirm Intent and slot types.

- Click on Add to selection.

- And then click on confirm Intent and slot types.

- Now Go inside your on created BookFlight.

**Confirmation**
[Info](#)

☒ Active

Prompts help to clarify whether the user wants to fulfil the intent or cancel it.

**▼ Prompts to confirm the intent**  
*Message: can i go ahead with your request.*

**Responses sent when the user declines the intent**  
*Message: okay, your request will not submitted.*

**Confirmation prompt**  
 What will the bot say to prompt the user to confirm this intent.

**Decline response**  
 What will the bot say if the user says NO to the confirmation prompt.

**Advanced options**

Configure confirmation prompts and decline responses.

- Scroll down and go to confirmation
- Once the user provided all details then What will the bot say to prompt the user to confirm this intent.  
Ex: - Can i go ahead with the request
- You can write failure prompt also totally depends on you

**Fulfilment**
[Info](#)

☒ Active

Run a lambda function to fulfil the intent and inform users of the status when it's complete.

**► On successful fulfilment**  
*Message: -*

**In case of failure**  
*Message: -*

**Closing response**
[Info](#)

☒ Active

You can define the response when closing the intent.

**► Response sent to the user after the intent is fulfilled**  
*Message: -*

**► Set values**  
 -

**Next step in conversation**  
 -

[+ Add conditional branching](#)

**Editor**

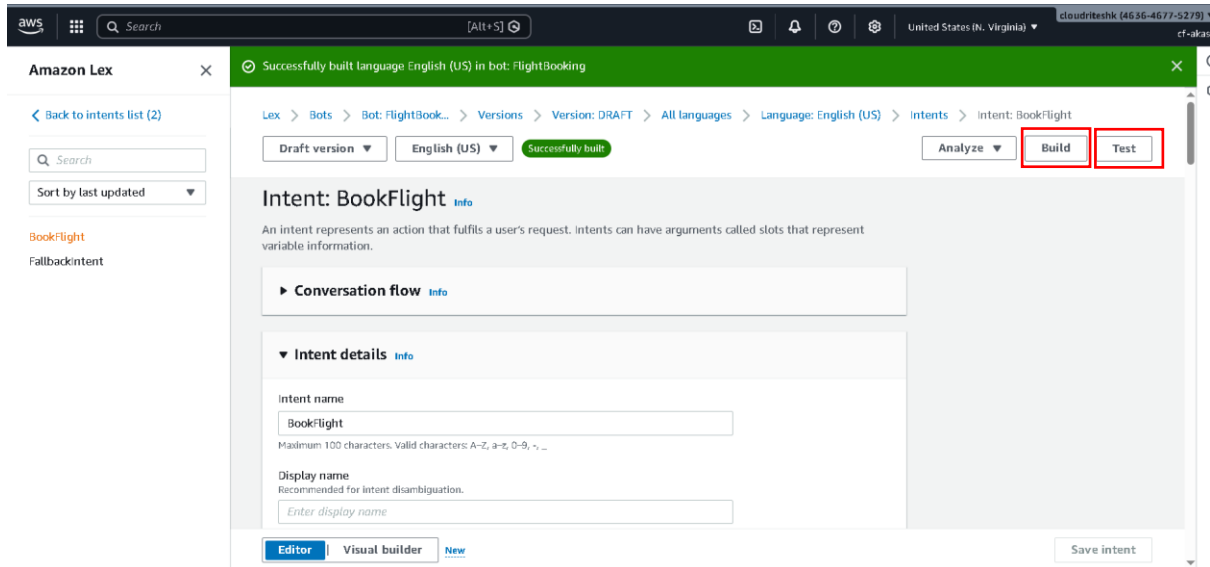

**Visual builder**

[New](#)

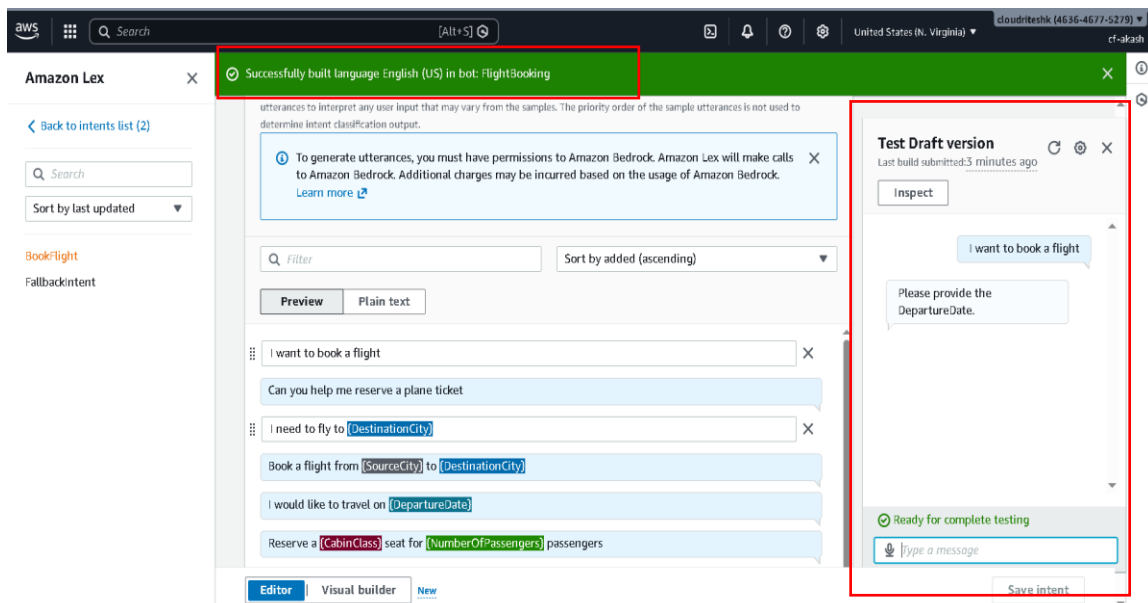

**Save intent**

- If you want write Fulfilment and closing Response you give it.
- Now save the intent.

- And then Click on Build top right.
- Now we successfully build our bot.
- Click on Test and test the bot.

- Our bot is successfully Running.
