

Amazon Q Business Application

Summary: -

I created a smart AI assistant that can read documents, answer questions, and summarize files. I uploaded documents, added secure user access, customized the application design, and tested the assistant by summarizing a PDF file.

Now we are going to Build from Scratch a marketing manager AI Assistant: -

- Go to Amazon console.
- Before Start creating AI Assistant.
- Go to IAM identity Center.
- IAM identity Center. This is your directory to add user and groups to the application that you are going to build.
- Just you need to go and Enable it.
- Now Open new console in new tab and search Amazon Q Business

- Go to Amazon Q Business

Create application

What kind of application do you want to build?

Application name

You can include hyphens (-), but not spaces. Maximum of 1000 alphanumeric characters.

User access
Select whether users need to authenticate to access this application environment.

☒ **Authenticated access**
Users must authenticate before accessing this application.

☐ **Anonymous access**
Users can access this application without authentication. Features that require user authentication are not supported.

Outcome
APIs are created for all applications.

☒ **Web experience**
Access Q as a managed web experience

- Now click on Create application
- Enter Application name
- Keep everything else default
- Now click on create

Advanced IAM Identity Center settings - optional

☒ **Application connected to IAM Identity Center**
Manage access to Application by assigning users and groups in IAM Identity Center to this application. [Learn more](#)

Quick start user - optional
Select a user to access the application. You can always edit user access after the application is created.

Select user
To add new users or view a full list of users and groups, use [Add new users and groups](#)

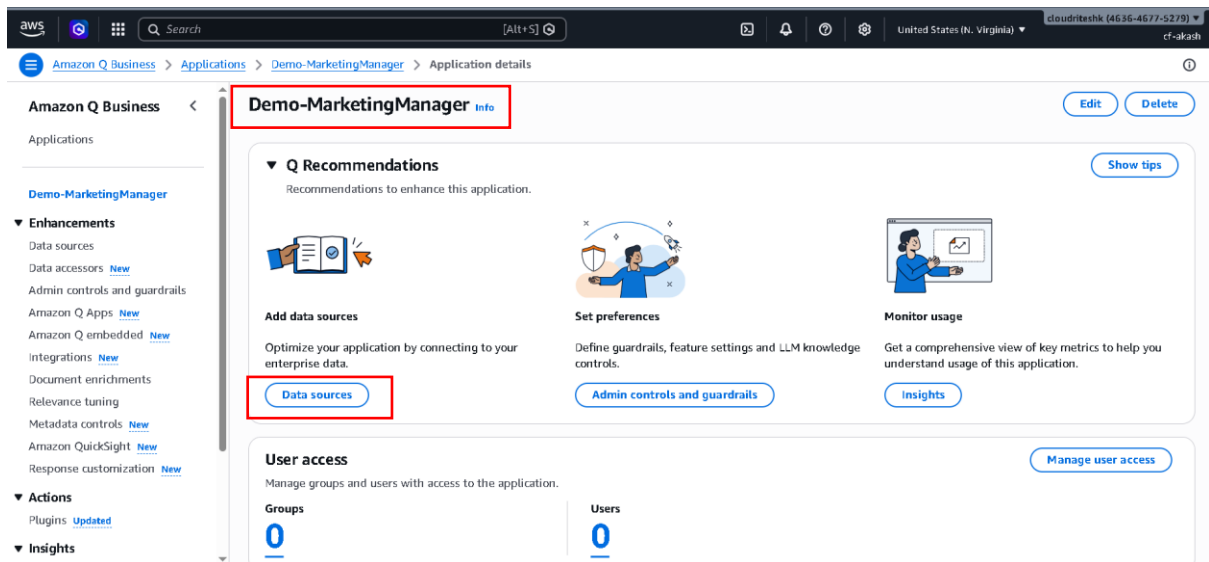

Select subscription
For information on what's included in the tiers of user subscriptions, access [Amazon Q Business pricing](#)

Application details
Default values have been selected. Expand to edit. Allowing end users to send queries directly to the LLM is ON by default; update in Admin controls and guardrails after creation.

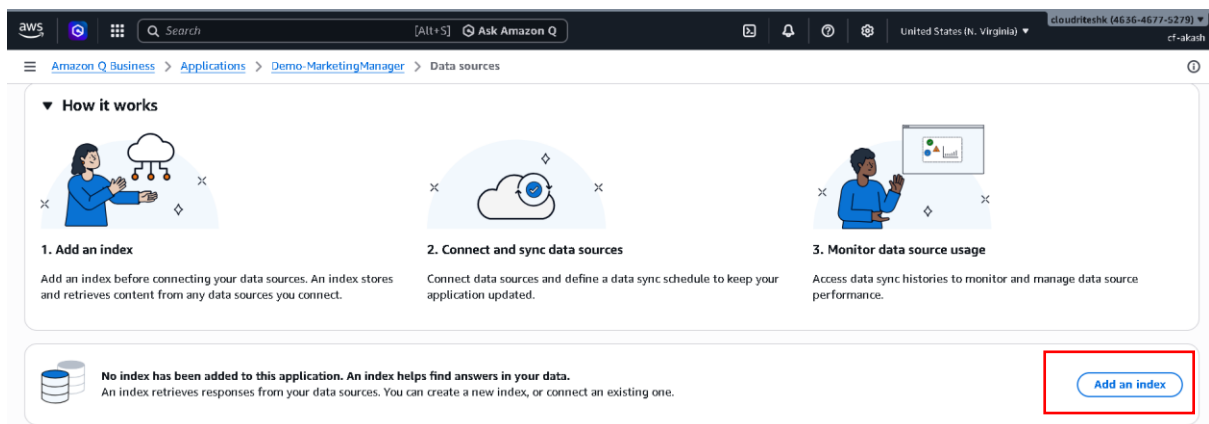

Application service access Create a new service linked role	Encryption Amazon Q Business owned key	Web experience service access Create role: QBusiness-WebExperience-kydtx

- Now click on Add data source

Add Amazon S3 [Info](#)

Provide details so that Amazon Q Business can index your Amazon S3 bucket repository of documents.

Name and description

Data source name
Enter an unique name for this data source within the index that can be easily identified by Amazon Q Business users.

demoQ

Description - optional
Add a description to identify this data source. This description will only be visible to Amazon Q Business administrators and can be edited later.

My data source connector for my documents

- Choose Amazon s3
- Now give Data source name
-

IAM role [Info](#)

IAM role guidance
IAM roles used for applications can't be used for data sources. If you are unsure if an existing role is used for an application, choose "Create a new role" to avoid an error.

IAM role
Amazon Q Business requires an IAM role to access repository credentials and application content.

Create a new service role (Recommended)

Role name
The role name uses the prefix "QBusiness-DataSource-". The created role will only work for this data source and its specific configuration.

QBusiness-DataSource-lyam1

- Choose IAM role

➤ Create a new service role (Recommended)

Data source location

☒ This AWS account
☐ Other AWS account

Sync scope [Info](#)

Enter the data source location [Info](#)
Locate the S3 bucket where your data is stored.

[Browse S3](#)

Maximum single file size [Info](#)
Set the maximum file size for crawling. Files with size up to 10,240 MB for video files, 2,048 MB for audio files, 500 MB for PDF/Word/PowerPoint documents, and 50 MB for all other supported documents can get indexed. Note that regardless of file type, any file with extracted text exceeding 30 MB won't be indexed. [Learn more about enabling video and audio.](#)

MB
Standard text documents: 500 MB max. If video/audio enabled: videos up to 10,240 MB, audio up to 2,048 MB.

Access control list (ACL) configuration file location - optional [Info](#)
Locate the ACL configuration file.

[Browse S3](#)

► **Metadata files folder location - optional** [Info](#)
Locate the folder that has your metadata JSON.

► **Filter patterns - optional**
Add a pattern to include only certain folders, or to exclude folders, file types or specific files in your repository. All paths are relative to the data source location S3 bucket. You can have a combined total of 100 patterns.

- Now in Sync scope
 - Click on Browse S3

Choose archive in S3
